

Geofabric Manufacturing Standards

ASTM D4354

Standard practice for sampling of geosynthetics for testing. It provides procedures for obtaining representative samples of geosynthetics for testing purposes.

ISO 10318

Defines terms used in geotextiles and related products, ensuring consistency in the terminology used internationally.

EN 13249

Specifies the requirements for geotextiles used in the construction of railways. It includes performance criteria for durability, mechanical, and hydraulic properties.

AASHTO M288

Standard specification for geotextile specifications for highway applications. It includes criteria for material properties, durability, and strength for various highway engineering uses.

BS 6906

Provides methods for determining the physical and mechanical properties of geotextiles, including tensile strength, puncture resistance, and elongation.
